From Zero to Mesh

Secure, Resilient Traffic Between Your Services with Kong Mesh

2026-10-29

Dustin Krysak, Staff Technical CSM

© Kong Inc.

How much do you use a mesh today?

A Not using one

B Evaluating

C In production on Kubernetes

D In production on VMs

© Kong Inc.

Three jobs

1

Retry

2

Identity

3

Failover

© Kong Inc.

Why a mesh

1

Sidecar

Beside each app

2

Control plane

Sends the rules

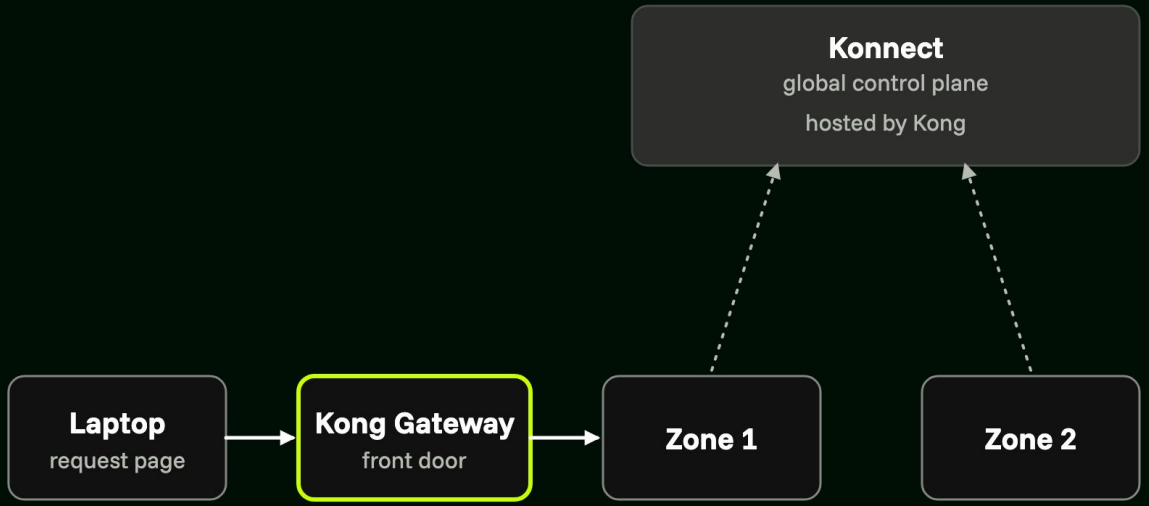

© Kong Inc.

What you will see

1. Two Kubernetes zones
2. Gateway: the front door
3. Konnect: control plane
4. A live request page

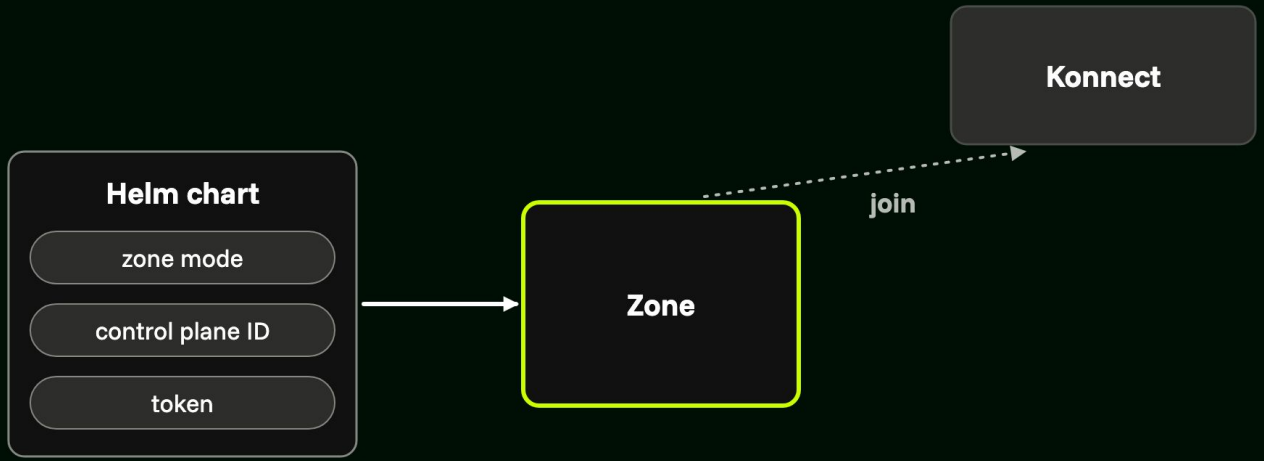

© Kong Inc.

How it fits

© Kong Inc.

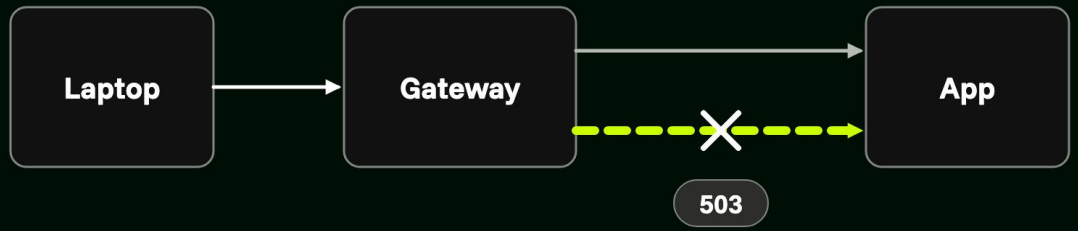

Install and join

© Kong Inc.

Baseline

95 of 200 failed

no policy

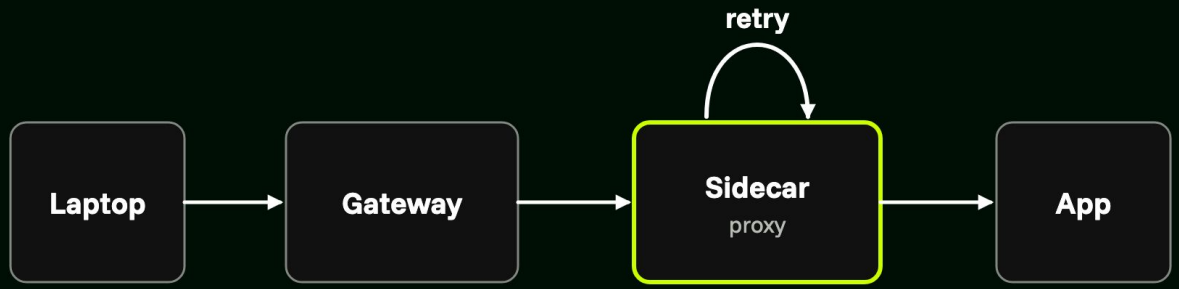

© Kong Inc.

Can one policy hide a failure?

© Kong Inc.

Retry

up to 3 tries on a 503

13 of 200

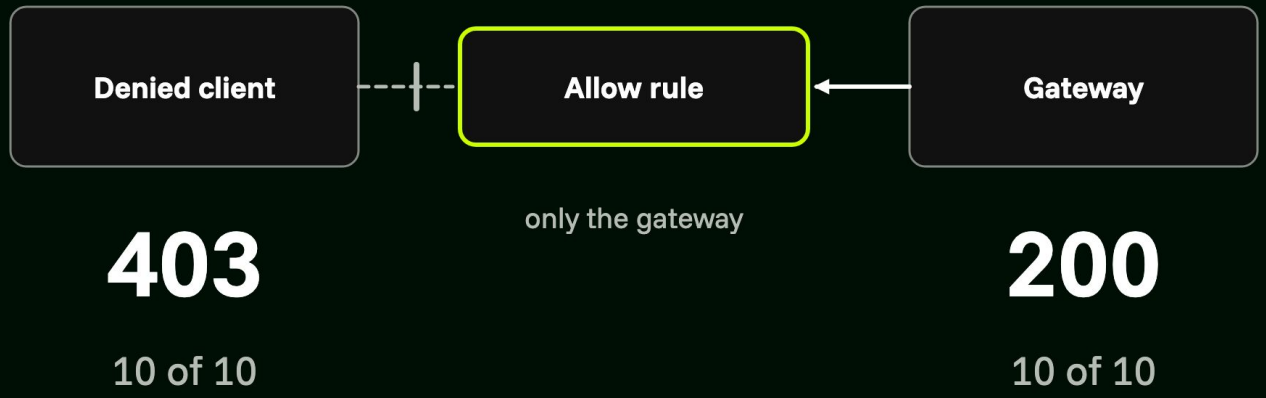

failed

© Kong Inc.

Who may call whom?

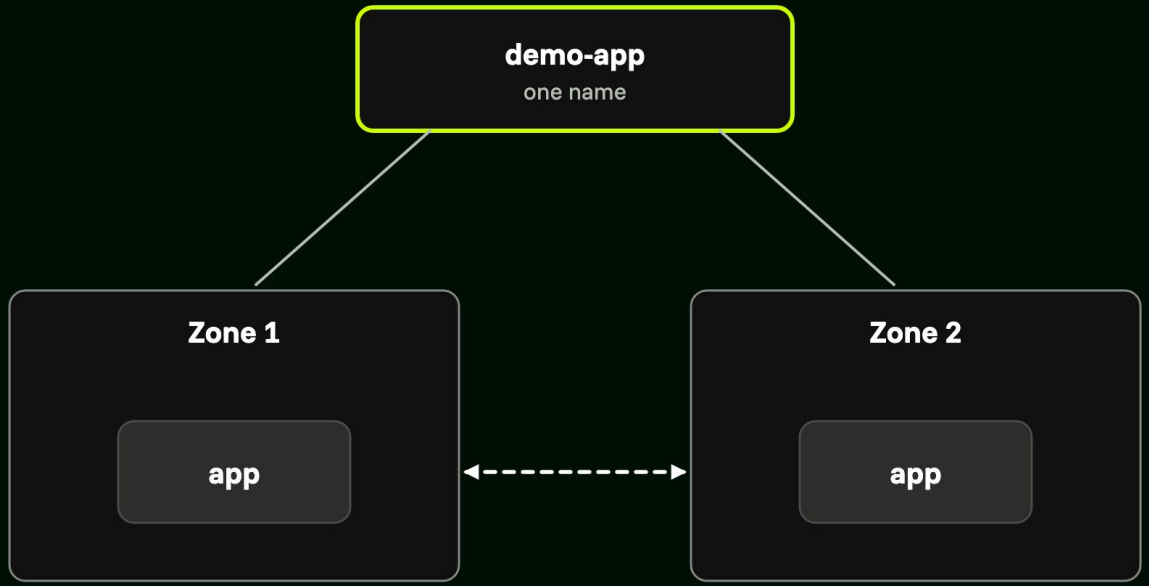

© Kong Inc.

Identity

© Kong Inc.

One service, two zones

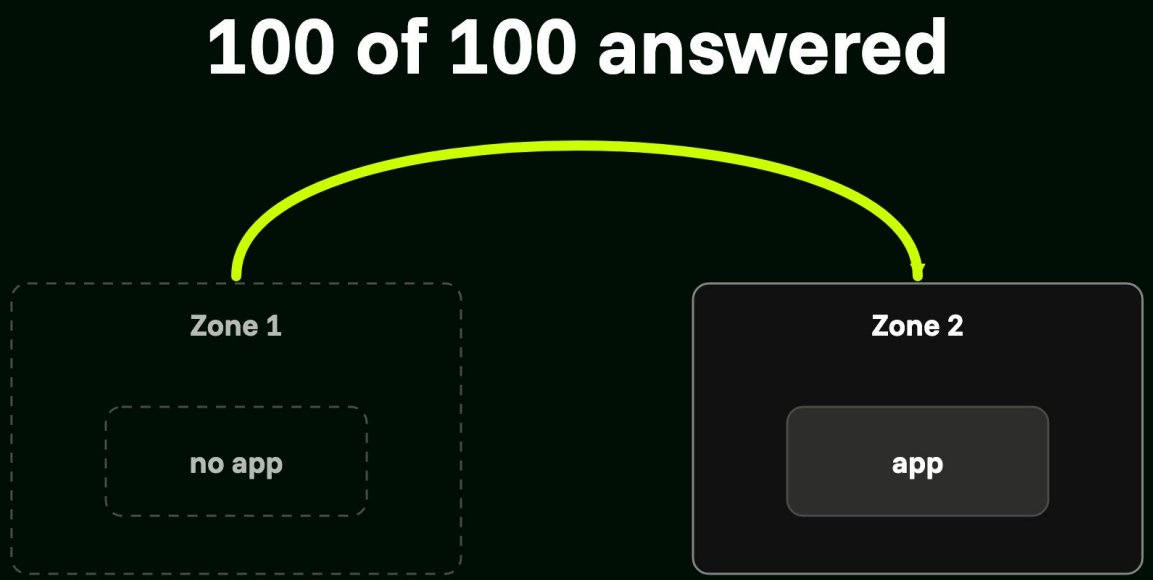

© Kong Inc.

What if zone 1 loses its app?

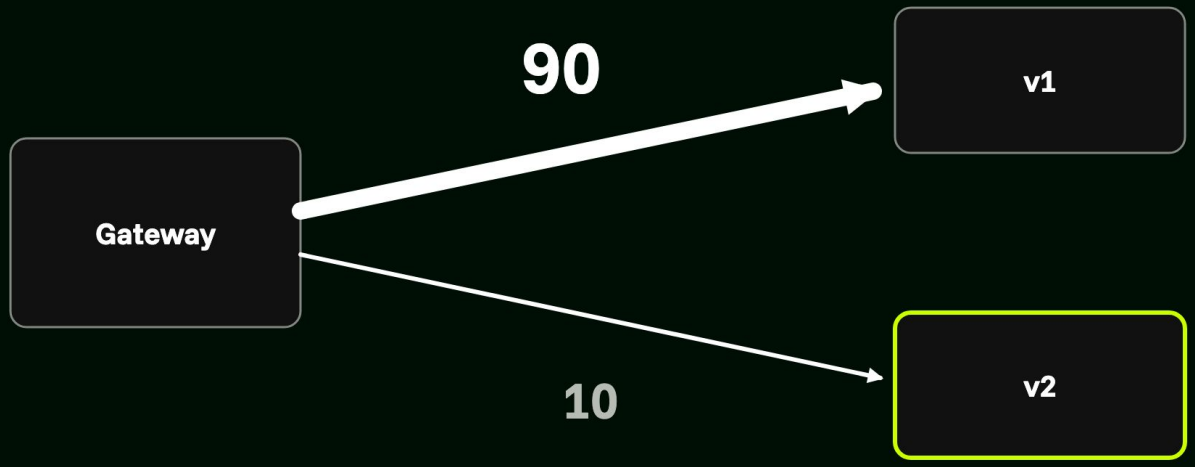

© Kong Inc.

Failover

© Kong Inc.

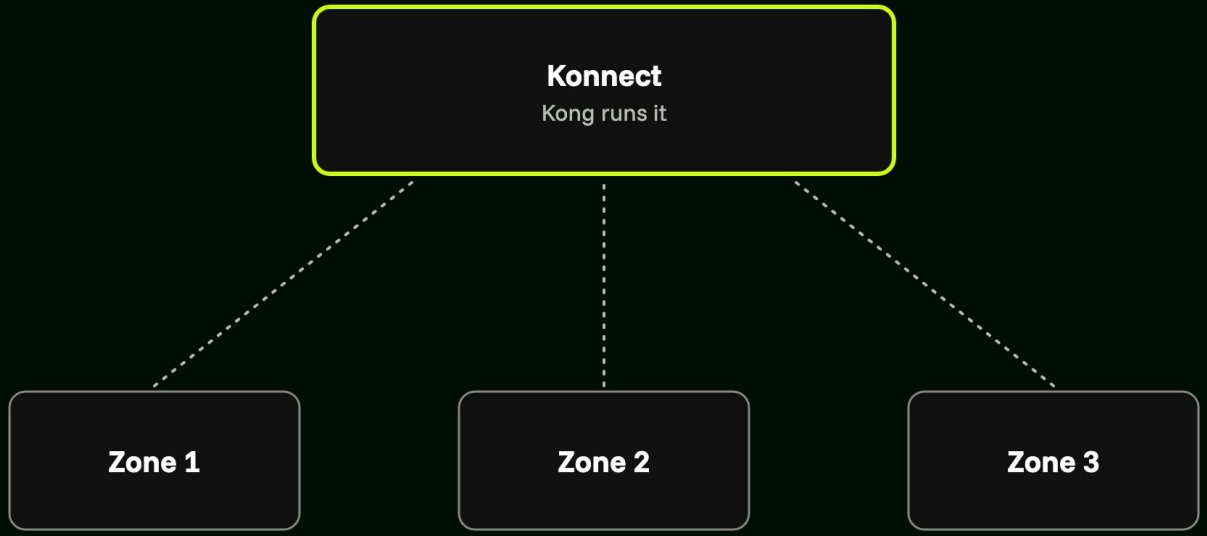

Canary (stretch)

no app change

© Kong Inc.

What you do not run

you run none

© Kong Inc.

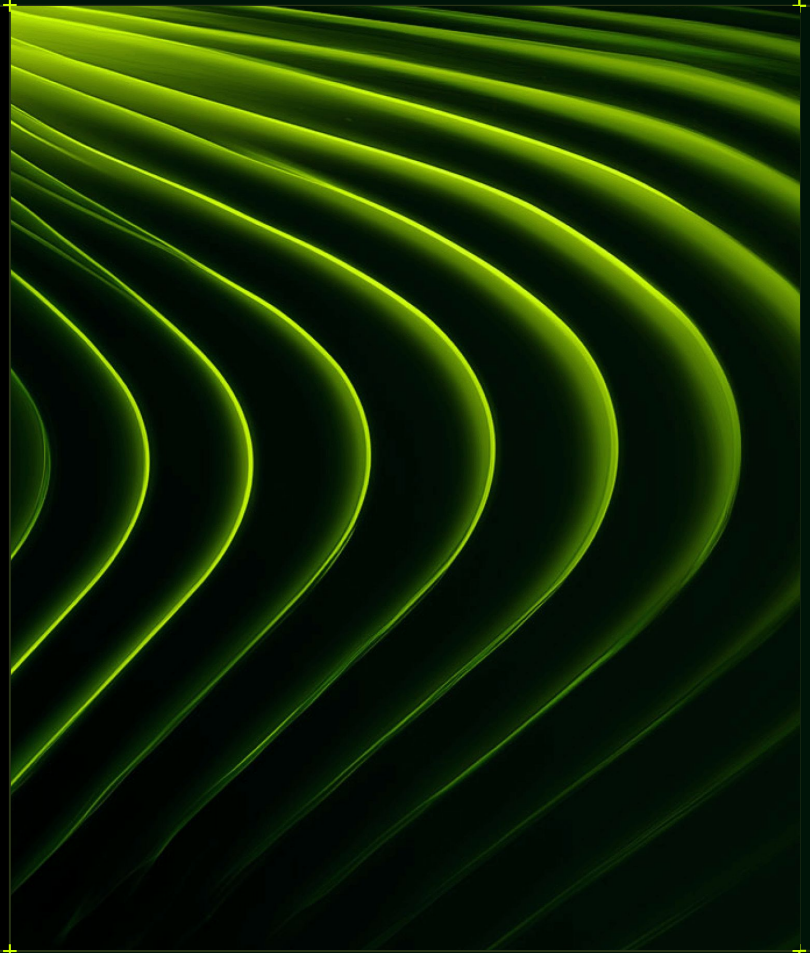

Key takeaways

1. Retry hides failures
2. Identity limits callers
3. Failover moves traffic

© Kong Inc.

Go deeper

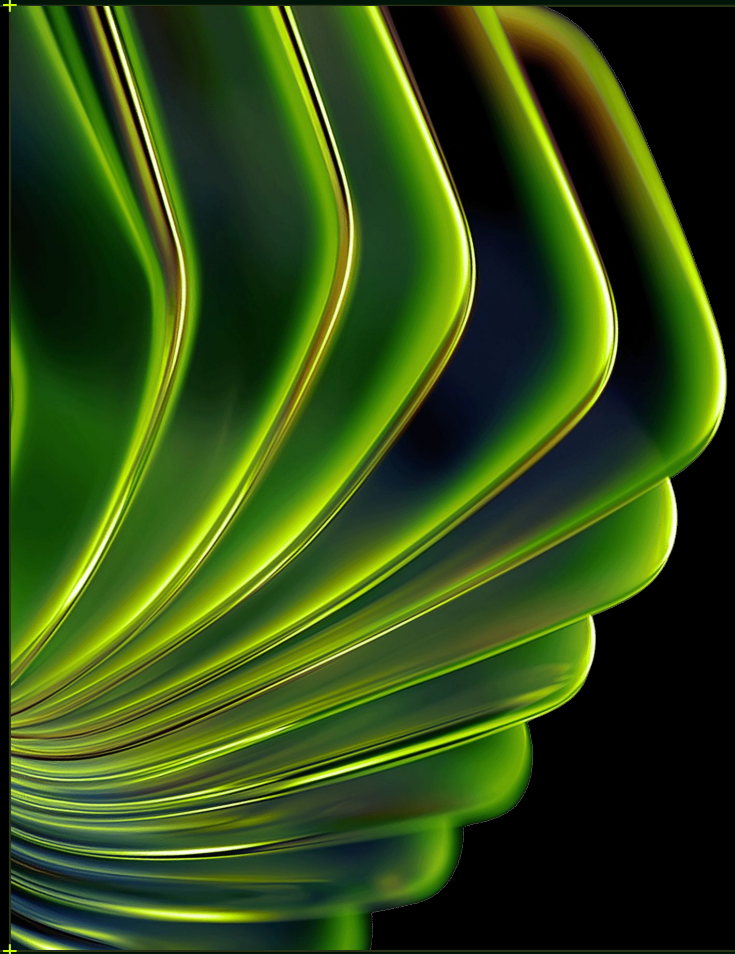

- Zone proxies
- Locality-aware load balancing
- MeshExternalService
